Credit Name: CSE 2110 Procedural Programming 1
Assignment Name: DigitDIsplay

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
I couldn't figure out how to put the numbers on the next line. but then I realized if i make a loop then it can constanly run the ln command
Planning the Solution
Did you create a plan or break the problem into smaller steps before coding?
How did you decide on the tools, data structures, or algorithms to use?
first I figurd out how to make the loop using the other skillbuilders then i solved the actual math problem
Implementation
Did you write the code in small pieces or attempt the entire solution at once?
How did you test your solution along the way to make sure it was working?
I did the loop first then the math seconed
Overcoming Challenges
What part of the problem was the most difficult for you?
How did you handle moments when you felt stuck or unsure of what to do next?
figuring out the math, as it was more complicated then my other problems in the past
Learning
Was there anything you learned that you think will help you with future challenges?
loops and how they work
