Credit Name: CSE 2110 Procedural Programming 1
Assignment Name: House

The following questions can help you in thinking critically about your problem-solving processes:

Understanding the Problem
How did you approach understanding the challenge?
Were there any parts of the problem you found confusing at first? If so, how did you resolve that confusion?
I saw how the output needed to look, and it made me kind of confused. so I pulled up docs and started figuring out who to make the house, and then copy and pasted the diffrent parts in my project.

Planning the Solution
Did you create a plan or break the problem into smaller steps before coding?
How did you decide on the tools, data structures, or algorithms to use?
I first made sure that my house was made in a google doc, I then made everything in my main method because nothing returned to it so it was pretty easy, I then knew that the methods I was gonna use were all void because I was not returning anything. And from there everything else was a brezze
Implementation
Did you write the code in small pieces or attempt the entire solution at once?
How did you test your solution along the way to make sure it was working?
The way that I broke it into peices was by Doing the main method by its self first, then the methods kind of all at the same time because they are all pretty similar and I could just copy and paste most of it.

```
public class House {

    public static void addRoof() {
        System.out.println("       /\\");
        System.out.println("      /  \\");
        System.out.println("     /    \\");
        System.out.println("    /      \\");
        System.out.println("   /________\\");
    }

    public static void addBase() {
        System.out.println("   I        I");
        System.out.println("   I        I");
        System.out.println("   I        I");
        System.out.println("   I________I");
    }

    public static void addWalk() {
        System.out.println("       **");
        System.out.println("       **********");
    }
```

Overcoming Challenges
What part of the problem was the most difficult for you?
How did you handle moments when you felt stuck or unsure of what to do next?
There wasn't reallya part where I actually felt stuck stuck, but at the very start it was hard for me to comprehend how I was gonna make sure the order of how each part of the house was printed, but then I just thought about it a little harder and I relized it was pretty simple
Learning
Was there anything you learned that you think will help you with future challenges?
The concept I learned most about was methods, mainly how they make your life more easy by writing less code
