Credit Name:CSE 2110 Procedural Programming 1

Assignment Name: DigitSum

Error Log Entry

What error message did you encounter (if any)?

Total cannot be resolved to a variable

What unexpected behavior did your program exhibit?

it displayed the complete wrong number

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

I added the number the user inputed into the total rather than adding the remainder of the number divided by 10

Include a screenshot of specific lines of code.

```
int num = input.nextInt();
        int newnum;
        int total = 0;
        while (num > 0) {
        newnum = num % 10;
            total += num;
        num = num / 10;
```

How did you fix the issue?

I replaced num with newnum

Provide the corrected code or solution using a screenshot.

```
int num = input.nextInt();
        int newnum;
        int total = 0;
        while (num > 0) {
        newnum = num % 10;
            total += newnum;
        num = num / 10;
```
